

# Test Execution Recommendation System ( T.E.R.S )

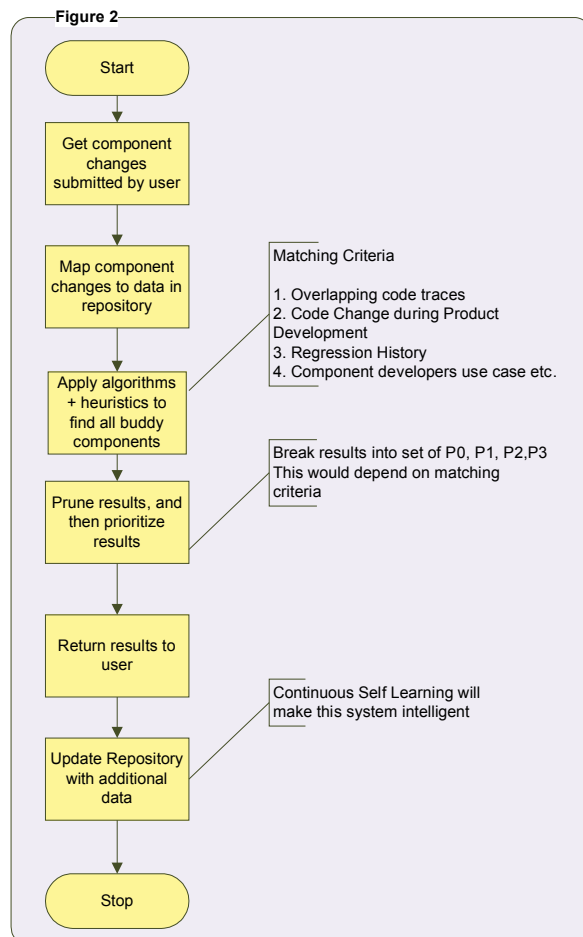

An intelligent approach to test fix packs

## Usage Scenario

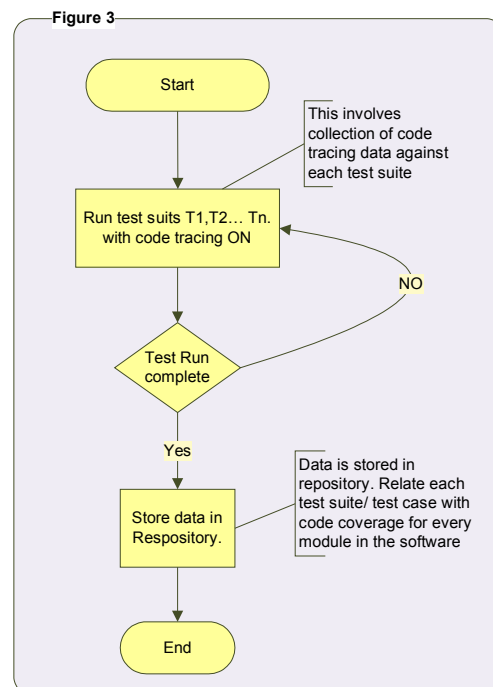

Gets list of test cases that should be run

## Flow in Processing Engine

## Preprocessing (Building the Data Repository)

## Advantages of TERS :

- ✗ Test team gets a better view and sense of suites that must be run during testing.
- ✗ Improve efficiency and less regressions after any release
- ✗ Do specific testing rather than blind running of tests suites hence improving time utilisation.
- ✗ Lastly, TERS is that it is a continually evolving and intelligent system which after certain training will start predicting very accurate results.
